HTML, XHTML, and WML support in Opera 9

HTML 4.01

This table groups the HTML elements after the modules in XHTML Modularization. While HTML 4.01 isn't modularized, the same elements and attributes are used, with the exception of the XMLns namespace attribute and Ruby, WML, and Obsolete. HTML 4.01 Strict additionally does not include the elements and attributes marked as Legacy.

XHTML 1.0

XHTML 1.0 Transitional includes all of the elements and attributes below, except for Ruby, WML, and Obsolete. XHTML 1.0 Strict additionally does not include the elements and attributes marked as Legacy.

WML 1.3 and 2.0

WML 1.3 includes the elements marked with "1.3" and "[1.3]" in the WML column. WML 1.3 does **not** support XML namespaces, and does not use the "WML:" prefix. WML 1.3 handling is triggered by the WML content type.

WML 2.0 includes the elements marked with "1.3" and "2.0" in the WML column. WML 2.0 does support XML namespaces, with a predetermined "WML:" prefix. WML 2.0 is triggered by the XHTML content type and [the proper DOCTYPE](#).
